### **DETAILED ACTION**

The following is an examiner's statement of reasons for allowance:

Claim 1 contains limitation of a method of providing exhaust gas recirculation (EGR) in a multi-cylinder engine method comprising the steps of: imparting motion to a valve actuator, actuating the engine valve of a first engine cylinder responsive to the imparted motion, determining a first and a second engine parameter level, modifying the imparted motion responsive to the level of the first engine parameter level and the second engine parameter level to produce an exhaust gas recirculation event. The prior art did not disclose such modifying of imparted motion based on two engine parameters.

Claim 13 claims a system comprising an EGR housing disposed on the engine housing, said EGR housing having an hydraulic passage formed therein, means for actuating the engine valve of a first engine cylinder, means for imparting motion to said valve actuation means; and means for modifying the motion imparted to said valve actuation means to produce an EGR event having an early valve closing time. The prior art did not disclose such as system producing an EGR event having an early valve closing time.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
